

1- Design and drive Robot

Sunday, June 14, 2020 10:04 AM

Practicle Mobile Robotics

Our **Robot** that we will be using

Learning curve at starting is **exponential**
darna nahi
Online course hy jo cheez samjh nahi aye

Learning curve in sewing is *exponential*
 darna nahi
 Online course hi jo chaz samjh nahi aye
 wo google karo or dubara dekho !

Selection of Components

Why we need it before start building?

1 - Body :

- Easily *avaible* body
- Design and 3d print it (more versatile and problem orientated)

2 - Motors :

- Types
 Servo
 BLDC
 Stepper.

DC

- Requirements (torque)
 • 2 kg
 • 20m/h. (Speed)
 • Power.

- DC and Gearing

- Load current 250mA MAX
- 0.0784532 Nm torque
- 1kg - 9.81 N (gear)

3 - Battery :

- Types
 Led acid
 Lithic ion.
 Lipo

- Requirements
 - 12V,
current.

- Specifications

$$2800 \text{ mah} = 2.8 \text{ A/h}$$

$$3 \times 3.7 = 11.1 \text{ V}$$

$$2.8 \text{ A}, 11.1 \rightarrow 1 \text{ hr}$$

$$5.6 \text{ A}, 11.1 \rightarrow 30 \text{ min.}$$

4 - Electronic Circuit :

- MicroController

(200mA)
(5V)

- Motor Driver

- Schematic

5 - Software

- Arduino IDE + install esp32 library

! Lets build the Hardware !

Important decision points revised

(in kay jawab anay chahien)

- Problem understanding
- Build Theory
- Complete Hardware build
- Write Code
- Analyze results

Understand Theory behind motion

- How we rotate a tyre

- Battery
- Motor driver
- Signals

3 3
0 0 stop
1 0 → forward
0 1 ← Reverse

PCB

Lets complete the Robot Building Process !!

Code Syntax Understanding

- Define
- Setup
- Loop
- Adding More Functions
